NOISE CONTROL

Sometimes forgotten in the design stage but realized post-build, the acoustics of a room are as important as the visual design. Now more than ever, sound moderation is an important element of interior spaces, especially in homes.

ACOUSTIC PLASTER IS A BEAUTIFUL NOISE CONTROL SOLUTION

A high-quality multi-layered acoustic plaster system expertly applied to walls or ceiling reduces sound reverberation, improving speech intelligibility and musical sound quality while limiting the transmission of sound from one space into another and from outdoors in.

ACOUSTIC PLASTER CONFORMS TO YOUR DESIGN

The beauty (literally) of an acoustic plaster system is that it naturally conforms to your design whether your room or structure features flat, curved, domed, or vaulted surfaces. The bottom line is that acoustic plaster allows you to maintain your design aesthetic without compromise.

ACOUSTIC PLASTER IS VERSATILE

Acoustic plasters can be applied in a variety of finishes from smooth to textured to a monolithic marble finish and come in a wide range of colors.

Possible finishes include:

- ▶ Concrete
- ▶ Marble
- ▶ Metallic
- ▶ Paneling
- ▶ Rough
- ▶ Semi-Smooth
- ▶ Silk
- ▶ Smooth
- ▶ Stone

Our installers are trained and certified to apply acoustic plaster systems using the highest quality materials in the industry. Depending upon the needs and timing of the project, we install during or after construction is completed.

We partner with the best designers and acoustic plaster manufacturers to apply flawless treatments to walls and ceiling for a sleek solution to the need for sound control. Call on us for an expert consultation.
